1 Definitions

1.1 Misc

Let
$$m = \left\lceil \left(\frac{N}{102}\right)^{\frac{1}{d}} \right\rceil$$
, base of the counter

MSR = most significant digit region

s =starting value of counter

$$d = \lceil \log_m s \rceil = \left\lfloor \frac{k}{2} \right\rfloor$$
, number of digits per row

 m^d = final value of the counter

 $n = m^d - s$, number of rows/ times to count

 $l = \lceil \log m \rceil + 2$, bits needed to encode each digit in binary, plus 2 for MSR and MSD

1.2 Determining the starting value

...therefore, let $d = \left\lfloor \frac{k}{2} \right\rfloor$, $m = \left\lceil \left(\frac{N}{102} \right)^{\frac{1}{d}} \right\rceil$, $l = \left\lceil \log m \right\rceil + 2$, $s = m^d - \left\lfloor \frac{N-12l-94}{12l+90} \right\rfloor$, where d is the number of digits per row of the counter, m is the base of the counter, l is the number of bits needed to encode each digit in binary plus 2 for indicating whether a digit is in the MSR and is the MSD in that region, and s is the starting value of the counter in decimal.

In general, the height of a digit region is 12l + 90. There is one exception, being the seed row, which has a height of 12l + 94. Let h be the height of the construction before any filler/roof tiles are added. If we define n as the number of Counter unit rows, then h = n(12l + 90) + (12l + 94). So then the maximum height of the counter is $m^d(12l + 90) + 12l + 94$. Since our goal is to end with a rectangle of height N, we need to pick a base such that the counter can increment so many times that when it stops, it is at least N.

Lemma 1.
$$N \le m^d (12l + 90) + 12l + 94$$
.

Proof.

$$N = 102 \left(\frac{N}{102}\right) = 102 \left(\left(\frac{N}{102}\right)^{\frac{1}{d}}\right)^{d} \le 102 \left[\left(\frac{N}{102}\right)^{\frac{1}{d}}\right]^{d}$$
$$= 102m^{d} \le 12lm^{d} + 90m^{d} \le 12lm^{d} + 90m^{d} + 12l + 94$$
$$= m^{d}(12l + 90) - 12l + 94$$

1.3 Filling in the gaps

...this means that the number of Counter unit rows n is $m^d - s$, where we have defined s as the starting value of the counter. To choose the best starting value, we find the value for n that gets h as close to N without exceeding N. It follows from the equation h = n(12l + 90) + 12l + 94, that $n = \left\lfloor \frac{N - 12l - 94}{12l + 90} \right\rfloor$. Thus, $s = m^d - \left\lfloor \frac{N - 12l - 94}{12l + 90} \right\rfloor$. As a result of each digit requiring a width of 2 tiles, if k is odd, one additional tile column must be added. The number of filler tiles needed for the width is $k \mod 2$, and the number of filler tiles for the height is $N - 12l - 94 \mod 12l + 90$.

2 General counter

(a) A "clean" counter row, before any reading has (b) Read digit 1 in the current row, write digit 1 started. in the next row.

(c) Read digit 2 in the current row, write digit 2 (d) Read digit 3 in the current row, write digit 3 in the next row. $^{\circ}$ in the next row.

Figure 1: This illustrates how a counter reads and writes a digit region, in a general sense. The counter starts in the rightmost digit region by reading the bottommost digit within that region. After reading digit 1 in the current row, the corresponding digit region in the next row be started in the next row. The counter writes the first digit in the next row, and then returns to the second digit in the current digit region. Once all the digits in the current digit region are read and written into the next row, the counter can then do one of the following: continue reading digits by moving on to the next digit region, cross back all the way to the right of the rectangle and start reading the next row, or halt.

2.1 Digit region explanation (in progress)

Each logical row of the counter is made up of $\lceil \frac{d}{3} \rceil$ "digit regions". A digit region is a group of 1-3 digits, stacked vertically on top of one another. Within a digit region, the digits are sorted in order of significance, thus the top digit is the most significant digit, the middle digit is second most significant and the bottommost digit is the least significant.

The leftmost digit region is most significant and the rightmost is the least significant. The counter reads the least significant digit (1) in digit region 1, and continues in the current row until it detects the final digit, in the most significant digit region (MSR).

(a) Digits in a typical counter

(b) Digits in two digit regions, stacked vertically, minimizing the width.

Contrary to a typical counter, each counter row has an approximate height of 3 digits $\approx 12l$. The digits are stacked up to 3 before increasing the width.

2.2 Detecting the edges

The counter must detect if a digit is in the MSR and if it's in the MSR, whether or not it is the most significant digit. To do this, all digits are encoded with two additional bits on the least significant end. If bit 0 is 1, the reader tiles know they could be reading the most significant digit (MSD) or in case 2, the second most significant digit. If bit 1 is 1, the digit currently being read is the MSD, otherwise the digit is digit 1 in case 2.

bit_1	bit_0	Meaning
0	0	digit is not in MSR
0	1	digit is in the MSR but is not the MSD
1	0	
1	1	digit is in the MSR and is MSD

2.3 Tile set

When describing a special case, i.e. "digit x – case y", whatever follows will only apply to the MSR (due to each case only affecting the MSR.)

2.3.1 Line Gadgets

Figure 3: Line gadgets

We will use the notation NorthN_Line and SouthN_Line where N corresponds to the length of a specific line gadget.

2.3.2 Initial Value (updated to assemble right to left like the other gadgets)

We begin by encoding s with the Seed unit. It has $\left\lceil \frac{d}{3} \right\rceil$ digit regions. Each digit region has three digits, except for the most significant digit region (MSR) which has d mod 3 if d mod 3 \neq 0, otherwise it has 3 digits.

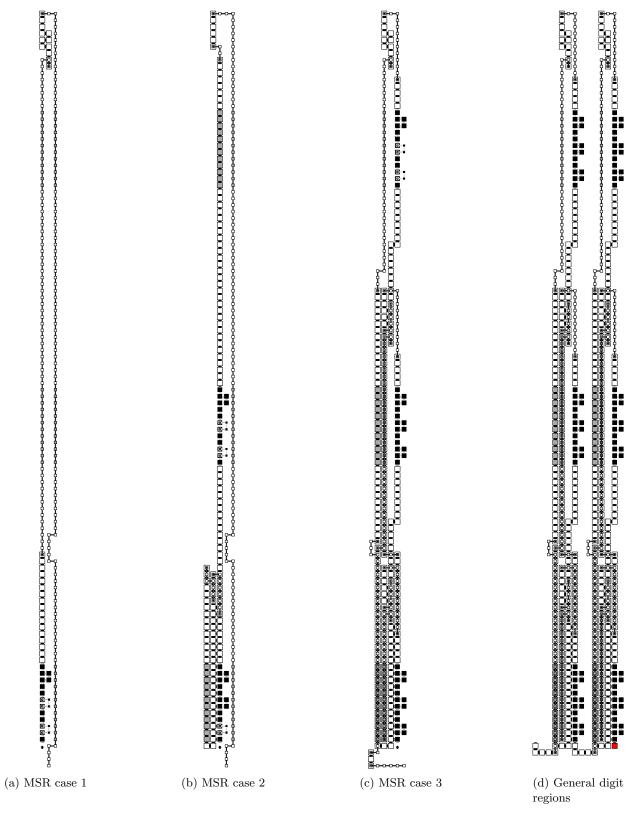

Figure 4: These figures show an example construction of the initial value, with all the possible MSR to the left. Of the three possible MSRs, of course only one would occur in a real assembly.

Note that we use i as the index of a digit in s and j as the index of a bit in a encoded digit.

• Create Seed($\langle CounterWrite, 1, seed, 0, 0 \rangle$)

The idea here is to repeat these steps starting from i = 0 and repeating until i is the index of the first digit in the MSR. These steps build general non-MSR digit regions shown in Figure 4d.

- Start:
- Digit: for each j = 0, ..., l-1 and each b in $bin(C_0[i])[j]$:
 - if j=0: create Counter_Write($\langle \text{CounterWrite}, 1, \text{seed}, i, j \rangle$, $\langle \text{CounterWrite}, 1, \text{seed}, i, j+1 \rangle$) from the general gadget shown in Figure 12a.
 - if j=1: create Counter_Write($\langle \text{CounterWrite}, 1, \text{seed}, i, j \rangle, \langle \text{CounterWrite}, 1, \text{seed}, i, j+1 \rangle$) from the general gadget shown in Figure 12a.
 - if 1 < j < l 1: create Counter_Write($\langle \text{CounterWrite}, 1, \text{seed}, i, j \rangle$, $\langle \text{CounterWrite}, 1, \text{seed}, i, j + 1 \rangle$) from the general gadget shown in Figure 12a if b = 0 or Figure 12b if b = 1.
 - if j=l-1: create Counter_Write($\langle \text{CounterWrite}, 1, \text{seed}, i, j \rangle, \langle \text{DigitTop}, 1, \text{seed}, i \rangle$) from the general gadget shown in Figure 12a if b=0 or Figure 12b if b=1.
- Digit_Top: the following statements create the gadget shown in Figure 14a.
 - Create North_Line5($\langle DigitTop, 1, seed, i \rangle$, $\langle DigitTopA, 1, seed, i \rangle$) from the micro-gadget shown in Figure 3a.
 - Create Topper($\langle \texttt{DigitTopA}, 1, \texttt{seed}, i \rangle$, $\langle \texttt{DigitTopB}, 1, \texttt{seed}, i \rangle$) from the micro-gadget shown in Figure 13a.
 - Create South_Line4 $l(\langle \texttt{DigitTopB}, 1, \texttt{seed}, i \rangle, \langle \texttt{ReturnPath}, 1, \texttt{seed}, i \rangle)$ from the micro-gadget shown in Figure 3b.
- Create Return_Path($\langle \text{ReturnPath}, 1, \text{seed}, i \rangle$, $\langle \text{NextRead}, 1, \text{seed}, i \rangle$) (single tile).
- $i \leftarrow i + 1$
- Create Next_Read($\langle \text{NextRead}, 1, \text{seed}, i-1 \rangle$, $\langle \text{SecondWarp}, 2, \text{seed}, i \rangle$) (single tile).
- Create Second_Warp($\langle SecondWarp, 2, seed, i \rangle$, $\langle PostWarp, 2, seed, i \rangle$) (single tile).
- Create Post_Warp($\langle \texttt{PostWarp}, 2, \texttt{seed}, i \rangle$, $\langle \texttt{CounterWrite}, 2, \texttt{seed}, i, 0 \rangle$) from the general gadget show in Figure 11c.
- Digit: for each $j = 0, \ldots, l-1$ and each b in $bin(C_0[i])[j]$:
 - if j=0: create Counter_Write($\langle \text{CounterWrite}, 2, \text{seed}, i, j \rangle$, $\langle \text{CounterWrite}, 2, \text{seed}, i, j+1 \rangle$) from the general gadget shown in Figure 12a.
 - if j=1: create Counter_Write($\langle \text{CounterWrite}, 2, \text{seed}, i, j \rangle$, $\langle \text{CounterWrite}, 2, \text{seed}, i, j+1 \rangle$) from the general gadget shown in Figure 12a.

- if 1 < j < l-1: create Counter_Write(\langle CounterWrite, 2, seed, $i, j \rangle$, \langle CounterWrite, 2, seed, $i, j+1 \rangle$) from the general gadget shown in Figure 12a if b=0 or Figure 12b if b=1.
- if j = l 1: create Counter_Write($\langle \text{CounterWrite}, 2, \text{seed}, i, j \rangle, \langle \text{DigitTop}, 2, \text{seed}, i \rangle$) from the general gadget shown in Figure 12a if b = 0 or Figure 12b if b = 1.
- Digit_Top: the following statements create the gadget shown in Figure 14a.
 - Create North_Line5($\langle DigitTop, 2, seed, i \rangle$, $\langle DigitTopA, 2, seed, i \rangle$) from the micro-gadget shown in Figure 3a.
 - Create Topper($\langle \texttt{DigitTopA}, 2, \texttt{seed}, i \rangle$, $\langle \texttt{DigitTopB}, 2, \texttt{seed}, i \rangle$) from the micro-gadget shown in Figure 13a.
 - Create South.Line4l($\langle \texttt{DigitTopB}, 2, \texttt{seed}, i \rangle$, $\langle \texttt{ReturnPath}, 2, \texttt{seed}, i \rangle$) from the micro-gadget shown in Figure 3b.
- Create Return_Path($\langle \text{ReturnPath}, 2, \text{seed}, i \rangle$, $\langle \text{NextRead}, 2, \text{seed}, i \rangle$) from the gadget in Figure 15d.
- $i \leftarrow i + 1$
- Create Next_Read($\langle \text{NextRead}, 2, \text{seed}, i-1 \rangle$, $\langle \text{FirstWarp}, 3, \text{seed}, i \rangle$) from the general gadget shown in Figure 16g.
- Create First_Warp($\langle FirstWarp, 3, seed, i \rangle, \langle WarpBridge, 3, seed, i \rangle$)
- Create Warp_Bridge($\langle \text{WarpBridge}, 3, \text{seed}, i \rangle$, $\langle \text{SecondWarp}, 3, \text{seed}, i \rangle$) from the general gadget shown in Figure 9a.
- Create Second_Warp(\langle SecondWarp, 3, seed, $i\rangle$, \langle PostWarp, 3, seed, $i\rangle$)
- Create Post_Warp($\langle \texttt{PostWarp}, 3, \texttt{seed}, i \rangle$, $\langle \texttt{CounterWrite}, 3, \texttt{seed}, i, 0 \rangle$) from the general gadget shown in Figure 11c.
- Digit: for each j = 0, ..., l-1 and each b in $bin(C_0[i])[j]$:
 - if j=0: create Counter_Write($\langle \text{CounterWrite}, 3, \text{seed}, i, j \rangle$, $\langle \text{CounterWrite}, 3, \text{seed}, i, j+1 \rangle$) from the general gadget shown in Figure 12a.
 - if j=1: create Counter_Write($\langle \text{CounterWrite}, 3, \text{seed}, i, j \rangle, \langle \text{CounterWrite}, 3, \text{seed}, i, j+1 \rangle$) from the general gadget shown in Figure 12a.
 - if 1 < j < l 1: create Counter_Write($\langle \text{CounterWrite}, 3, \text{seed}, i, j \rangle$, $\langle \text{CounterWrite}, 3, \text{seed}, i, j + 1 \rangle$) from the general gadget shown in Figure 12a if b = 0 or Figure 12b if b = 1.
 - if j = l 1: create Counter_Write($\langle \text{CounterWrite}, 3, \text{seed}, i, j \rangle, \langle \text{DigitTop}, 3, \text{seed}, i \rangle$) from the general gadget shown in Figure 12a if b = 0 or Figure 12b if b = 1.
- Digit_Top: the following statements create the gadget shown in Figure 14a.
 - Create North_Line5($\langle \texttt{DigitTop}, 3, \texttt{seed}, i \rangle$, $\langle \texttt{DigitTopA}, 3, \texttt{seed}, i \rangle$) from the micro-gadget shown in Figure 3a.
 - Create Topper($\langle \text{DigitTopA}, 3, \text{seed}, i \rangle$, $\langle \text{DigitTopB}, 3, \text{seed}, i \rangle$) from the micro-gadget shown in Figure 13a.

- Create South_Line4l($\langle \texttt{DigitTopB}, 3, \texttt{seed}, i \rangle$, $\langle \texttt{ReturnPath}, 3, \texttt{seed}, i \rangle$) from the micro-gadget shown in Figure 3b.
- Create Return_Path($\langle ReturnPath, 3, seed, i \rangle$, $\langle NextRead, 3, seed, i, \rangle$) from the gadget in Figure 15g.
- $i \leftarrow i + 1$
- Create Next_Read($\langle NextRead, 3, seed, i-1 \rangle$, $\langle CounterWrite, 1, seed, i \rangle$) from the general gadget shown in Figure 16i.
- if i is not an index in the MSR, go to start, else go to MSR.

MSR

Case 1 - if d - i = 1 to create the assembly shown in 4a.

- Digit: for each j = 0, ..., l-1 and each b in $bin(C_0[i])[j]$:
 - if j=0: create Counter_Write($\langle \text{CounterWrite}, 1, \text{seed}, i, j \rangle, \langle \text{CounterWrite}, 1, \text{seed}, i, j+1 \rangle$) from the general gadget shown in Figure 12b.
 - if j=1: create Counter_Write(\langle CounterWrite, 1, seed, $i,j\rangle$, \langle CounterWrite, 1, seed, $i,j+1\rangle$) from the general gadget shown in Figure 12b.
 - if 1 < j < l-1: create Counter_Write(\langle CounterWrite, 1, seed, $i, j \rangle$, \langle CounterWrite, 1, seed, $i, j+1 \rangle$) from the general gadget shown in Figure 12a if b=0 or Figure 12b if b=1.
 - if j=l-1: create Counter_Write($\langle \text{CounterWrite}, 1, \text{seed}, i, j \rangle, \langle \text{DigitTop}, 1, \text{seed}, i \rangle$) from the general gadget shown in Figure 12a if b=0 or Figure 12b if b=1.
- Digit_Top: the following statements create the gadget shown in Figure 14h
 - Create North_Line4l($\langle \texttt{DigitTop}, 1, \texttt{seed}, i \rangle$, $\langle \texttt{DigitTopA}, 1, \texttt{seed}, i \rangle$) from the micro-gadget shown in Figure 3a.
 - Create North_Line4($\langle \text{DigitTopA}, 1, \text{seed}, i \rangle$, $\langle \text{DigitTopB}, 1, \text{seed}, i \rangle$) from the micro-gadget shown in Figure 3a.
 - Create Topper($\langle \text{DigitTopB}, 1, \text{seed}, i \rangle$, $\langle \text{DigitTopC}, 1, \text{seed}, i \rangle$) from the micro-gadget shown in Figure 13a.
 - Create South_Line4 $l(\langle DigitTopC, 1, seed, i \rangle, \langle DigitTopD, 1, seed, i \rangle)$ from the micro-gadget shown in Figure 3b.
 - Create South_Line30($\langle \text{DigitTopD}, 1, \text{seed}, i \rangle$, $\langle \text{DigitTopE}, 1, \text{seed}, i \rangle$) from the micro-gadget shown in Figure 3b.
 - Create South_Line4 $l(\langle DigitTopE, 1, seed, i \rangle, \langle DigitTopF, 1, seed, i \rangle)$ from the micro-gadget shown in Figure 3b.
 - Create South_Line14($\langle DigitTopF, 1, seed, i \rangle$, $\langle DigitTopG, 1, seed, i \rangle$) from the micro-gadget shown in Figure 3b.
 - Create South_Line17($\langle \texttt{DigitTopG}, 1, \texttt{seed}, i \rangle$, $\langle \texttt{ReturnPath}, 1, \texttt{seed}, i \rangle$) from the micro-gadget shown in Figure 3b.

- Create Return_Path($\langle \text{ReturnPath}, 1, \text{seed}, i \rangle$, $\langle \text{NextRead}, 1, \text{seed}, i \rangle$) from the general gadget shown in Figure 15m
- Create Next_Read($\langle NextRead, 1, seed, i \rangle$, $\langle Cross_Next_Row, increment \rangle$) from the micro-gadget shown in Figure 16k.

Case 2 - if d - i = 2 to create the assembly shown in 4b.

- Digit: for each $j = 0, \ldots, l-1$ and each b in $bin(C_0[i])[j]$:
 - if j=0: create Counter_Write($\langle \text{CounterWrite}, 2, \text{seed}, i, j \rangle$, $\langle \text{CounterWrite}, 2, \text{seed}, i, j+1 \rangle$) from the general gadget shown in Figure 12b.
 - if j=1: create Counter-Write($\langle \text{CounterWrite}, 2, \text{seed}, i, j \rangle$, $\langle \text{CounterWrite}, 2, \text{seed}, i, j+1 \rangle$) from the general gadget shown in Figure 12a.
 - if 1 < j < l 1: create Counter_Write($\langle \text{CounterWrite}, 2, \text{seed}, i, j \rangle$, $\langle \text{CounterWrite}, 2, \text{seed}, i, j + 1 \rangle$) from the general gadget shown in Figure 12a if b = 0 or Figure 12b if b = 1.
 - if j = l 1: create Counter_Write($\langle \text{CounterWrite}, 2, \text{seed}, i, j \rangle$, $\langle \text{DigitTop}, 2, \text{seed}, i \rangle$) from the general gadget shown in Figure 12a if b = 0 or Figure 12b if b = 1.
- Digit_Top: the following statements create the gadget shown in Figure 14k
 - Create Topper($\langle \texttt{DigitTop}, 1, \texttt{seed}, i \rangle$, $\langle \texttt{DigitTopA}, 1, \texttt{seed}, i \rangle$) from the micro-gadget shown in Figure 13b
 - Create South_Line4 $l(\langle \texttt{DigitTopA}, 1, op, \texttt{msr} \rangle, \langle \texttt{ReturnPath}, 1, op, \texttt{msr} \rangle)$ from the micro-gadget shown in Figure 3b
- Create Return_Path($\langle \text{ReturnPath}, 1, \text{seed}, i \rangle$, $\langle \text{NextRead}, 1, \text{seed}, i \rangle$) (single tile)
- $i \leftarrow i+1$
- Create Next_Read($\langle NextRead, 1, seed, i-1 \rangle$, $\langle SecondWarp, 2, seed, i \rangle$) (single tile)
- Create Second_Warp($\langle SecondWarp, 2, seed, i \rangle$, $\langle PostWarp, 2, seed, i \rangle$) (single tile)
- Create Post_Warp($\langle \texttt{PostWarp}, 2, \texttt{seed}, i \rangle$, $\langle \texttt{CounterWrite}, 2, \texttt{seed}, i, 0 \rangle$) from the general gadget show in Figure 111.
- Digit: for each j = 0, ..., l-1 and each b in $bin(C_0[i])[j]$:
 - if j=0: create Counter_Write($\langle \text{CounterWrite}, 2, \text{seed}, i, j \rangle, \langle \text{CounterWrite}, 2, \text{seed}, i, j+1 \rangle$) from the general gadget shown in Figure 12b.
 - if j=1: create Counter_Write($\langle \text{CounterWrite}, 2, \text{seed}, i, j \rangle, \langle \text{CounterWrite}, 2, \text{seed}, i, j+1 \rangle$) from the general gadget shown in Figure 12b.
 - $\begin{array}{l} \text{ if } 1 < j < l-1 \text{:} \\ \text{create Counter_Write} \big(\left\langle \texttt{CounterWrite}, 2, \texttt{seed}, i, j \right\rangle, \left\langle \texttt{CounterWrite}, 2, \texttt{seed}, i, j+1 \right\rangle \big) \\ \text{from the general gadget shown in Figure 12a if } b = 0 \text{ or Figure 12b if } b = 1. \end{array}$

- if j=l-1: create Counter_Write($\langle \text{CounterWrite}, 2, \text{seed}, i, j \rangle, \langle \text{DigitTop}, 2, \text{seed}, i \rangle$) from the general gadget shown in Figure 12a if b=0 or Figure 12b if b=1.
- Digit_Top: the following statements create the gadget shown in Figure 14n
 - Create North_Line4 $l(\langle \texttt{DigitTop}, 2, \texttt{seed}, i \rangle, \langle \texttt{DigitTopA}, 2, \texttt{seed}, i \rangle)$ from the micro-gadget shown in Figure 3a.
 - Create Topper($\langle DigitTopA, 2, seed, i \rangle$, $\langle DigitTopB, 2, seed, i \rangle$) from the micro-gadget shown in Figure 13c.
 - Create South_Line4 $l(\langle DigitTopB, 2, seed, i \rangle, \langle DigitTopC, 2, seed, i \rangle)$ from the micro-gadget shown in Figure 3b.
 - Create South_Line30($\langle \texttt{DigitTopC}, 2, \texttt{seed}, i \rangle$, $\langle \texttt{ReturnPath}, 2, \texttt{seed}, i \rangle$) from the micro-gadget shown in Figure 3b.
- Create Return_Path($\langle ReturnPath, 2, seed, i \rangle$, $\langle NextRead, 2, seed, i \rangle$) from the micro-gadget shown in Figure 15m.
- Create Next_Read(\(\text{NextRead}, 2, \text{seed} \) , \(\text{Cross_Next_Row}, \text{increment} \)) from the micro-gadget shown in Figure 16k.

Case 3 – if d - i = 3 to create the assembly shown in 4c.

- Digit: for each $j = 0, \ldots, l-1$ and each b in $bin(C_0[i])[j]$:
 - if j=0: create Counter_Write($\langle \text{CounterWrite}, 1, \text{seed}, i, j \rangle, \langle \text{CounterWrite}, 1, \text{seed}, i, j+1 \rangle$) from the general gadget shown in Figure 12a.
 - if j=1: create Counter_Write($\langle \texttt{CounterWrite}, 1, \texttt{seed}, i, j \rangle$, $\langle \texttt{CounterWrite}, 1, \texttt{seed}, i, j+1 \rangle$) from the general gadget shown in Figure 12a.
 - $\begin{array}{l} \text{ if } 1 < j < l-1; \\ \text{create Counter_Write}(\, \langle \texttt{CounterWrite}, 1, \texttt{seed}, i, j \rangle \,, \langle \texttt{CounterWrite}, 1, \texttt{seed}, i, j+1 \rangle \,) \\ \text{from the general gadget shown in Figure 12a if } b = 0 \text{ or Figure 12b if } b = 1. \end{array}$
 - if j=l-1: create Counter_Write($\langle \text{CounterWrite}, 1, \text{seed}, i, j \rangle, \langle \text{DigitTop}, 1, \text{seed}, i \rangle$) from the general gadget shown in Figure 12a if b=0 or Figure 12b if b=1.
- Digit_Top: the following statements create the gadget shown in Figure 14a.
 - Create North_Line5($\langle DigitTop, 1, seed, i \rangle$, $\langle DigitTopA, 1, seed, i \rangle$) from the micro-gadget shown in Figure 3a.
 - Create Topper($\langle \text{DigitTopA}, 1, \text{seed}, i \rangle$, $\langle \text{DigitTopB}, 1, \text{seed}, i \rangle$) from the micro-gadget shown in Figure 13a.
 - Create South_Line4 $l(\langle \texttt{DigitTopB}, 1, \texttt{seed}, i \rangle, \langle \texttt{ReturnPath}, 1, \texttt{seed}, i \rangle)$ from the micro-gadget shown in Figure 3b.
- $i \leftarrow i + 1$
- Create Return_Path($\langle \text{ReturnPath}, 1, \text{seed}, i-1 \rangle$, $\langle \text{SecondWarp}, 2, \text{seed}, i \rangle$) (single tile).
- Create Second_Warp($\langle SecondWarp, 2, seed, i \rangle$, $\langle PostWarp, 2, seed, i \rangle$) (single tile).
- Create Post_Warp($\langle PostWarp, 2, seed, i \rangle$, $\langle CounterWrite, 2, seed, i, 0 \rangle$) from the general gadget show in Figure 11c.

- Digit: for each j = 0, ..., l-1 and each b in $bin(C_0[i])[j]$:
 - if j=0 create Counter_Write($\langle \text{CounterWrite}, 2, \text{seed}, i, j \rangle$, $\langle \text{CounterWrite}, 2, \text{seed}, i, j+1 \rangle$) from the general gadget shown in Figure 12a.
 - if j=1: create Counter_Write($\langle \text{CounterWrite}, 2, \text{seed}, i, j \rangle$, $\langle \text{CounterWrite}, 2, \text{seed}, i, j+1 \rangle$) from the general gadget shown in Figure 12a.
 - if 1 < j < l-1: create Counter_Write($\langle \text{CounterWrite}, 2, \text{seed}, i, j \rangle$, $\langle \text{CounterWrite}, 2, \text{seed}, i, j+1 \rangle$) from the general gadget shown in Figure 12a if b=0 or Figure 12b if b=1.
 - if j=l-1: create Counter_Write($\langle \text{CounterWrite}, 2, \text{seed}, i, j \rangle, \langle \text{DigitTop}, 2, \text{seed}, i \rangle$) from the general gadget shown in Figure 12a if b=0 or Figure 12b if b=1.
- Digit_Top: the following statements create the gadget shown in Figure 14a.
 - Create North_Line5($\langle DigitTop, 2, seed, i \rangle$, $\langle DigitTopA, 2, seed, i \rangle$) from the micro-gadget shown in Figure 3a.
 - Create Topper($\langle \texttt{DigitTopA}, 2, \texttt{seed}, i \rangle$, $\langle \texttt{DigitTopB}, 2, \texttt{seed}, i \rangle$) from the micro-gadget shown in Figure 13a.
 - Create South_Line4l($\langle \texttt{DigitTopB}, 2, \texttt{seed}, i \rangle$, $\langle \texttt{ReturnPath}, 2, \texttt{seed}, i \rangle$) from the micro-gadget shown in Figure 3b.
- Create Return_Path($\langle \text{ReturnPath}, 2, \text{seed}, i \rangle$, $\langle \text{NextRead}, 2, \text{seed}, i \rangle$) from the gadget in Figure 15d.
- $i \leftarrow i+1$
- Create Next_Read($\langle \text{NextRead}, 2, \text{seed}, i-1 \rangle$, $\langle \text{FirstWarp}, 3, \text{seed}, i \rangle$) from the general gadget shown in Figure 16g.
- Create First_Warp($\langle FirstWarp, 3, seed, i \rangle, \langle WarpBridge, 3, seed, i \rangle$)
- Create Warp_Bridge($\langle WarpBridge, 3, seed, i \rangle$, $\langle SecondWarp, 3, seed, i \rangle$) from the general gadget shown in Figure 9a.
- Create Second_Warp($\langle SecondWarp, 3, seed, i \rangle$, $\langle PostWarp, 3, seed, i \rangle$)
- Create Post_Warp($\langle PostWarp, 3, seed, i \rangle$, $\langle CounterWrite, 3, seed, i, 0 \rangle$) from the general gadget shown in Figure 11c.
- Digit: for each j = 0, ..., l-1 and each b in $bin(C_0[i])[j]$:
 - if j=0: create Counter_Write($\langle \text{CounterWrite}, 3, \text{seed}, i, j \rangle$, $\langle \text{CounterWrite}, 3, \text{seed}, i, j+1 \rangle$) from the general gadget shown in Figure 12b.
 - if j=1: create Counter_Write($\langle \text{CounterWrite}, 3, \text{seed}, i, j \rangle$, $\langle \text{CounterWrite}, 3, \text{seed}, i, j+1 \rangle$) from the general gadget shown in Figure 12b.
 - if 1 < j < l 1: create Counter_Write($\langle \text{CounterWrite}, 3, \text{seed}, i, j \rangle$, $\langle \text{CounterWrite}, 3, \text{seed}, i, j + 1 \rangle$) from the general gadget shown in Figure 12a if b = 0 or Figure 12b if b = 1.
 - if j = l 1: create Counter_Write($\langle \text{CounterWrite}, 3, \text{seed}, i, j \rangle, \langle \text{DigitTop}, 3, \text{seed}, i \rangle$) from the general gadget shown in Figure 12a if b = 0 or Figure 12b if b = 1.

- Digit_Top: the following statements create the gadget shown in Figure 14a.
 - Create North_Line5($\langle DigitTop, 3, seed, i \rangle$, $\langle DigitTopA, 3, seed, i \rangle$) from the micro-gadget shown in Figure 3a.
 - Create Topper($\langle \texttt{DigitTopA}, 3, \texttt{seed}, i \rangle$, $\langle \texttt{DigitTopB}, 3, \texttt{seed}, i \rangle$) from the micro-gadget shown in Figure 13a.
 - Create South_Line4 $l(\langle \mathtt{DigitTopB}, 3, \mathtt{seed}, i \rangle, \langle \mathtt{ReturnPath}, 3, \mathtt{seed}, i \rangle)$ from the micro-gadget shown in Figure 3b.
- Create Return_Path($\langle ReturnPath, 3, seed, i \rangle$, $\langle NextRead, 3, increment, msr, msd \rangle$) from the gadget in Figure 15g.

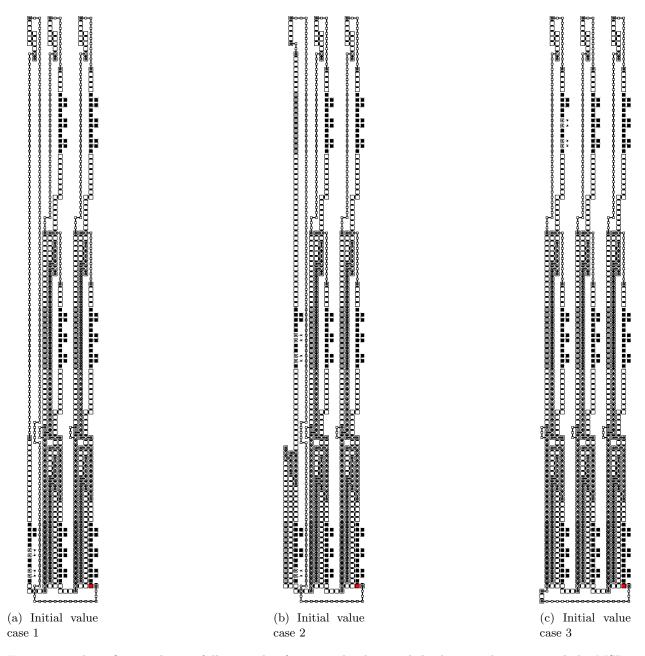

Figure 5: These figures show a full example of an initial value, with both general regions and the MSRs together, instead of separated as shown above.

2.4 Counter Unit

2.4.1 Digit readers

```
• For each i=1,2,3,\ j=0,\dots,l-2,\ u\in\{0,1\}^j, and op\in\{\mathtt{increment},\mathtt{copy}\}: -\ \mathsf{if}\ j=0 \colon \mathtt{create}\ \mathtt{CounterRead}(\ \langle \mathtt{CounterRead},i,\lambda,op\rangle\,,\\ \langle \mathtt{CounterRead},i,0,op\rangle\,,\\ \langle \mathtt{CounterRead},i,1,op\rangle\,)
```

from the general gadget in Figure 6.

```
- else: create Counter_Read( \langle \mathtt{CounterRead}, i, u, op \rangle, \langle \mathtt{CounterRead}, i, 0u, op \rangle, \langle \mathtt{CounterRead}, i, 1u, op \rangle) from the general gadget in Figure 6.
```

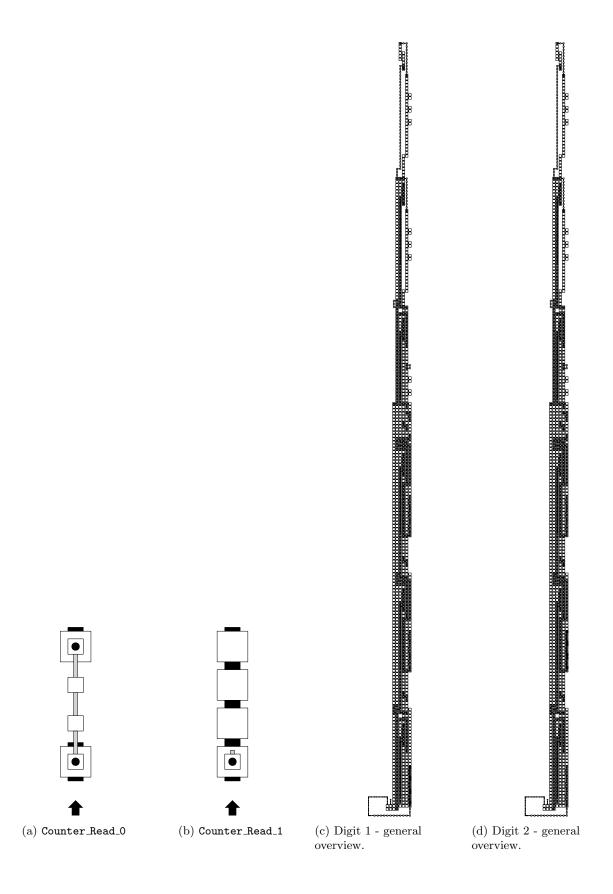

- For each i = 1, 2, 3 and each $u \in \{0, 1\}^{l-1}$:
 - Create Counter_Read($\langle CounterRead, i, u, copy \rangle$, $\langle PreWarp, i, 0u, copy \rangle$, $\langle PreWarp, i, 1u, copy \rangle$) from the general gadget in Figure 6.

Since the counter must only increment the current value if the result will be less than m, the Counter_Read gadgets that have both an increment signal and input size of l-2 must first right shift the bits 2 spots, and then for each possible value after reading one more bit, check whether that value is less than m-1. Basically, if the next bit read is a 0, we check if the current value + 1 is less than m. If the next bit read is a 1, we check if current value + $2^{\log(m)-1} + 1$ is less than m. For both cases, if the counter can increment the current value, then the Counter_Read gadgets output the incremented value to the Pre_Warp gadgets and output a copy signal. Otherwise, if the counter is unable to increment the value, it outputs signal in which the bits of the digit is all zeroes and it will propagate the increment signal to the next digit.

Algorithm 1 Incrementing and halting

```
1: function READMSB
         if u ends with "11" then
 2:
 3:
              out0 \leftarrow \langle \mathtt{halt} \rangle.
              out1 \leftarrow \langle \mathtt{halt} \rangle.
 4:
 5:
         else
              guess0 \leftarrow 0u >> 2.
 6:
              guess1 \leftarrow 1u >> 2.
 7:
              if convertToDecimal(quess0) + 1 < m - 1 then
 8:
                   out0 \leftarrow \langle \text{PreWarp}, i, convertToBinary(convertToDecimal(guess0) + 1) + u[1] + [0], \text{copy} \rangle.
9:
10:
              else
                   out0 \leftarrow \langle \texttt{PreWarp}, i, repeat("0", m) + u[1] + u[0], \texttt{increment} \rangle.
11:
12:
              if convertToDecimal(guess1) + 1 < m - 1 then
                   out1 \leftarrow \langle \text{PreWarp}, i, convertToBinary(convertToDecimal(guess1) + 1) + u[1] + [0], \text{copy} \rangle.
13:
14:
              else
                   out1 \leftarrow \langle \texttt{PreWarp}, i, repeat("0", m) + u[1] + u[0], \texttt{increment} \rangle.
15:
```

- Create Counter_Read($\langle CounterRead, i, u, increment \rangle, out0, out1)$ from the general gadget in Figure 6.

(e) Digit 3 - general overview.

(f) Digit 1 - case 1 overview. (g) Digit 1 - case 2 overview. (h) Digit 2 - case 2 overview.

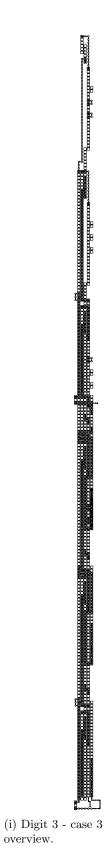

Figure 6: The Counter_Read gadgets.

2.4.2 Warping

We now explain the Warp_Unit. A warp unit generally consists of the following 5 gadgets: Pre_Warp, First_Warp, Warp_Bridge, Second_Warp, Post_Warp. The job of these 5 gadgets is to transport the value read by the Counter_Read all the way to the digit region in the next row, so that the Counter_Write gadgets can write the next value in the correct locations. The First_Warp and Second_Warp gadgets are single tile gadgets that have north and south glues with identical labels. This allows the gadgets to continuously assemble until stopped by earlier parts of the assembly. These single tile gadgets also have one additional glue that will allow the next piece in the warp unit to assemble, however the assembly will also block this side of the tile all the way until the gadget can no longer continue assembling in the north direction.

• Pre_Warp: These gadgets use the bits read from the Counter_Read gadgets to translate them into a signal used to tell the counter whether to begin reading another digit in the current row, or cut across the rectangle and begin reading the first digit in the next row. This signal is used from the Pre_Warp gadgets through the Digit_Top gadgets are attached after writing the current digit.

```
For each i = 1, 2, 3, u \in \{0, 1\}^l, and each op \in \{\text{increment}, \text{copy}\}:
```

- if u ends with 00: create $Pre_Warp(\langle PreWarp, i, u, op \rangle, \langle FirstWarp, i, u, op \rangle)$ from the general gadget in Figure 7a.
- if u ends with 01: create $Pre_Warp(\langle PreWarp, 1, u, op \rangle, \langle FirstWarp, 1, u, op, msr \rangle)$ from the general gadget in Figure 7e.
- if u ends with 11: create $Pre_Warp(\langle PreWarp, i, u, op \rangle, \langle FirstWarp, i, u, op, msr, msd \rangle)$ from the general gadget in Figure 7g if i = 1 (case 1), or Figure 7i if i = 2 (case 2), or Figure 7a if i = 3 (case 3).

(a) Digits 1, 2, & 3 - general. (b) Digit 1 - general (c) Digit 2 - general (d) Digit 3 - general overview. The black tiles in overview. The black tiles in overview. The black tiles in this figure correspond to the gadget shown in subfigure a. gadget shown in subfigure a.

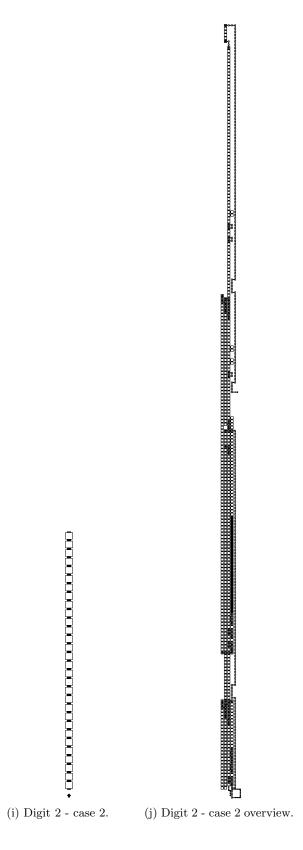

Figure 7: The Pre_Warp gadgets.

• First_Warp: The idea of the First_Warp gadget is to transport the information read by the Counter_Read gadgets, usually across a distance $O(\log m)$. We do this using a single tile that assembles an infinite line in the north direction, and has one unique glue either in the east direction or west direction. This unique glue will at some point later in the assembly, that is determined by earlier parts of the assembly, no longer be blocked. When this occurs, it can finally attach to the Warp_Bridge gadget (except in a few special cases). This process signifies the "waking up" of the First_Warp gadgets. When this gadget wakes up, it must also be blocked in the north direction, which prevents a truly infinite line from assembling. The geometry required for this process is guarenteed to be in place by earlier-assembled Digit_Top gadgets.

```
For each u \in \{0,1\}^l, and each op \in \{\text{increment}, \text{copy}\}:
```

```
- For each i=1,2,3: create First_Warp( \langle \text{FirstWarp}, i, u, op \rangle, \langle \text{FirstWarp}, i, u, op \rangle, \langle \text{WarpBridge}, i, u, op \rangle)
```

from the single tile gadget, shown in Figure 8a if i = 1 or Figure 8b if i = 2, otherwise from Figure 8c if i = 3.

```
- \text{ Create First\_Warp(} \left\langle \texttt{FirstWarp}, 1, u, op, \texttt{msr} \right\rangle, \\ \left\langle \texttt{FirstWarp}, 1, u, op, \texttt{msr} \right\rangle, \\ \left\langle \texttt{PostWarp}, 1, u, op, \texttt{msr} \right\rangle) \\ \text{ from the single tile gadget shown in Figure 8f.}
```

 $- \text{ Create First_Warp}(\left< \texttt{FirstWarp}, 1, u, op, \texttt{msr}, \texttt{msd} \right>, \\ \left< \texttt{FirstWarp}, 1, u, op, \texttt{msr}, \texttt{msd} \right>, \\ \left< \texttt{PostWarp}, 1, u, op, \texttt{msr}, \texttt{msd} \right>)$

from the single tile gadget shown in Figure 8e.

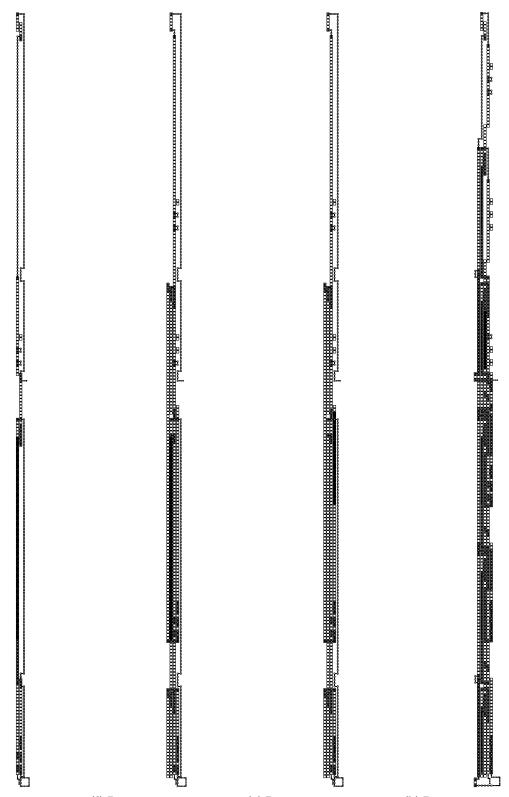

```
- Create First_Warp( \langle \text{FirstWarp}, 2, u, op, \text{msr}, \text{msd} \rangle, \langle \text{FirstWarp}, 2, u, op, \text{msr}, \text{msd} \rangle, \langle \text{WarpBridge}, 2, u, op, \text{msr}, \text{msd} \rangle)
```

from the single tile gadget shown in Figure 8g.

```
- \text{ Create First\_Warp}( \langle \texttt{FirstWarp}, 3, u, op, \texttt{msr}, \texttt{msd} \rangle, \\ \langle \texttt{FirstWarp}, 3, u, op, \texttt{msr}, \texttt{msd} \rangle, \\ \langle \texttt{WarpBridge}, 3, u, op, \texttt{msr}, \texttt{msd} \rangle)
```

from the single tile gadget shown in Figure 8h.

(e) Digit 1 - case 1 overview. (f) Digit 1 - case 2 overview. (g) Digit 2 - case 2 overview. (h) Digit 3 - case 3 overview.

Figure 8: The First_Warp gadget overviews.

• Warp_Bridge: a Warp_Bridge gadget is a gadget which assembles when the First_Warp gadget makes it to its final destination. The goal of the Warp_Bridge is to assemble a path from the end of the First_Warp gadgets to the start of the Second_Warp gadgets. For digit 1 in cases 1 and 2, the Warp_Bridge is omitted from the Warp_Unit.

For each $u \in \{0,1\}^l$, and each $op \in \{\text{increment}, \text{copy}\}:$

- For each i=1,2,3: create Warp_Bridge($\langle WarpBridge, i, u, op \rangle$, $\langle SecondWarp, i, u, op \rangle$) from the general gadget in Figure 9a.
- Create Warp_Bridge($\langle WarpBridge, 2, u, op, msr, msd \rangle$, $\langle SecondWarp, 2, u, op, msr, msd \rangle$) from the general gadget in Figure 9g.
- Create Warp_Bridge($\langle WarpBridge, 3, u, op, msr, msd \rangle$, $\langle SecondWarp, 3, u, op, msr, msd \rangle$) from the general gadget in Figure 9a.

Figure 9: The Warp_Bridge gadgets.

• Second_Warp: Similar to the First_Warp gadgets, the idea of the Second_Warp gadget is to also to transport the information read by the Counter_Read gadgets. We do this using a single tile that assembles an infinite line in the north direction, and has one unique glue either in the east direction or up direction. This unique glue will at some point later in the assembly, that is determined by earlier parts of the assembly, no longer be blocked. When this occurs, it can finally attach to the Post_Warp gadget. This process signifies the "waking up" of the Second_Warp gadgets. When this gadget wakes up, it must also be blocked in the north direction, which prevent a truly infinite line from assembling. The geometry required for this process is guarenteed to be in place by earlier-assembled Digit_Top gadgets.

```
For each u \in \{0,1\}^l, and each op \in \{\text{increment}, \text{copy}\}:
```

```
- For each i=1,2,3: Create Second_Warp(\langleSecondWarp,i,u,op\rangle, \langleSecondWarp,i,u,op\rangle, \langlePostWarp,i,u,op\rangle) from the single tile gadget, shown in Figure 10a if i=1 or Figure 10b if i=2, otherwise from Figure 10c if i=3.
```

```
- \ \operatorname{Create} \ \mathtt{SecondWarp}(\ \langle \mathtt{SecondWarp}, 2, u, op, \mathtt{msr}, \mathtt{msd} \rangle \ , \\ \langle \mathtt{SecondWarp}, 2, u, op, \mathtt{msr}, \mathtt{msd} \rangle \ , \\ \langle \mathtt{PostWarp}, 2, u, op, \mathtt{msr}, \mathtt{msd} \rangle \ ) \\ \text{from the single tile gadget shown in Figure 10f.}
```

```
- Create Second_Warp( \langle SecondWarp, 3, u, op, msr, msd \rangle, \langle SecondWarp, 3, u, op, msr, msd \rangle, \langle PostWarp, 3, u, op, msr, msd \rangle) from the single tile gadget shown in Figure 10h.
```

2.4.3 Counter write

- For each $i = 1, 2, 3, j = l 1, ..., 1, u \in \{0, 1\}^j$, and each $op \in \{\text{increment}, \text{copy}\}:$
 - Create Counter_Write($\langle CounterWrite, i, u0, op \rangle$, $\langle CounterWrite, i, u, op \rangle$) from the general gadget in Figure 12a
 - Create Counter_Write($\langle \text{CounterWrite}, i, u1, op \rangle$, $\langle \text{CounterWrite}, i, u, op \rangle$) from the general gadget in Figure 12b
 - Create Counter-Write ($\langle \text{CounterWrite}, 1, u0, op, \text{msr} \rangle$, $\langle \text{CounterWrite}, 1, u, op, \text{msr} \rangle$) from the general gadget in Figure 12a
 - Create Counter_Write($\langle CounterWrite, 1, u1, op, msr \rangle$, $\langle CounterWrite, 1, u, op, msr \rangle$) from the general gadget in Figure 12b
 - Create Counter_Write($\langle CounterWrite, i, u0, op, msr, msd \rangle$, $\langle CounterWrite, i, u, op, msr, msd \rangle$) from the general gadget in Figure 12a
 - Create Counter-Write ($\langle \text{CounterWrite}, i, u1, op, \text{msr}, \text{msd} \rangle$, $\langle \text{CounterWrite}, i, u, op, \text{msr}, \text{msd} \rangle$) from the general gadget in Figure 12b
- For each i = 1, 2, 3 and each $op \in \{\text{increment}, \text{copy}\}:$
 - Create Counter_Write($\langle CounterWrite, i, 0, op \rangle$, $\langle DigitTop, i, op \rangle$) from the general gadget in Figure 12a
 - Create Counter_Write($\langle CounterWrite, i, 1, op \rangle$, $\langle DigitTop, i, op \rangle$) from the general gadget in Figure 12b
 - Create Counter_Write ($\langle CounterWrite, 1, 0, op, msr \rangle$, $\langle DigitTop, 1, op, msr \rangle$) from the general gadget in Figure 12a
 - Create Counter_Write($\langle CounterWrite, 1, 1, op, msr \rangle$, $\langle DigitTop, 1, op, msr \rangle$) from the general gadget in Figure 12b
 - Create Counter_Write($\langle CounterWrite, i, 0, op, msr, msd \rangle, \langle DigitTop, i, op, msr, msd \rangle$) from the general gadget in Figure 12a
 - Create Counter-Write ($\langle \text{CounterWrite}, i, 1, op, \text{msr}, \text{msd} \rangle$, $\langle \text{DigitTop}, i, op, \text{msr}, \text{msd} \rangle$) from the general gadget in Figure 12b

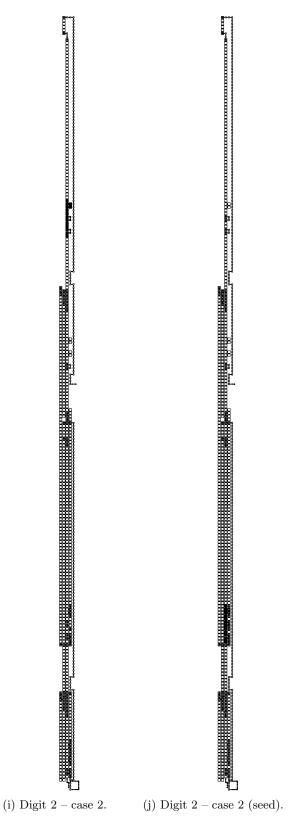

Figure 12: The Counter_Write gadgets

2.4.4 Digit tops

The Digit_Top gadgets have special geometry designed so that First_Warp and Second_Warp tiles are allowed to "wake up", and complete their warping journey. Each digit has some type of Digit_Top gadget, however, depending on the digit region and index of a specific digit, the exact digit top will differ.

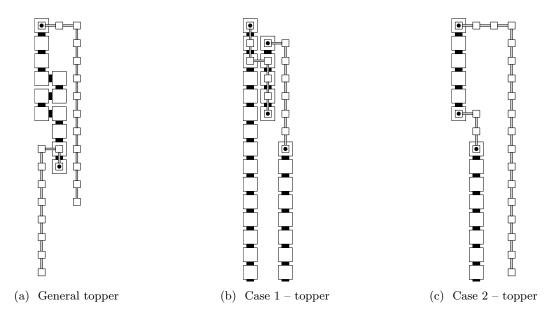

Figure 13: Topper micro-gadgets

For each $op \in \{\text{increment}, \text{copy}\}$

- Digit 1 (general): the following statements create the gadget shown in Figure 14a
 - Create North_Line5($\langle DigitTop, 1, op \rangle$, $\langle DigitTopA, 1, op \rangle$) from the micro-gadget shown in Figure 3a.
 - Create Topper($\langle \texttt{DigitTopA}, 1, op \rangle$, $\langle \texttt{DigitTopB}, 1, op \rangle$) from the micro-gadget shown in Figure 13a.
 - Create South_Line4 $l(\langle \texttt{DigitTopB}, 1, op \rangle, \langle \texttt{Return_Path}, 1, op \rangle)$ from the micro-gadget shown in Figure 3b.
- Digit 1 (MSR): the following statements create the gadget shown in Figure 14k
 - Create Topper($\langle \texttt{DigitTop}, 1, op, \texttt{msr} \rangle$, $\langle \texttt{DigitTopA}, 1, op, \texttt{msr} \rangle$) from the micro-gadget shown in Figure 13b.
 - Create South_Line4 $l(\langle \texttt{DigitTopA}, 1, op, \texttt{msr} \rangle, \langle \texttt{Return_Path}, 1, op, \texttt{msr} \rangle)$ from the micro-gadget shown in Figure 3b.
- Digit 1 (MSD): the following statements create the gadget shown in Figure 14h

- Create North_Line4 $l(\langle \texttt{DigitTop}, 1, op, \texttt{msr}, \texttt{msd} \rangle, \langle \texttt{DigitTopA}, 1, op, \texttt{msr}, \texttt{msd} \rangle)$ from the micro-gadget shown in Figure 3a.
- Create North_Line4($\langle DigitTopA, 1, op, msr, msd \rangle$, $\langle DigitTopB, 1, op, msr, msd \rangle$) from the micro-gadget shown in Figure 3a.
- Create Topper($\langle DigitTopB, 1, op, msr, msd \rangle$, $\langle DigitTopC, 1, op, msr, msd \rangle$) from the micro-gadget shown in Figure 13a.
- Create South_Line4 $l(\langle DigitTopC, 1, op, msr, msd \rangle, \langle DigitTopD, 1, op, msr, msd \rangle)$ from the micro-gadget shown in Figure 3b.
- Create South_Line30($\langle DigitTopD, 1, op, msr, msd \rangle$, $\langle DigitTopE, 1, op, msr, msd \rangle$) from the micro-gadget shown in Figure 3b.
- Create South_Line4 $l(\langle DigitTopE, 1, op, msr, msd \rangle, \langle DigitTopF, 1, op, msr, msd \rangle)$ from the micro-gadget shown in Figure 3b.
- Create South_Line14($\langle DigitTopF, 1, op, msr, msd \rangle$, $\langle DigitTopG, 1, op, msr, msd \rangle$) from the micro-gadget shown in Figure 3b.
- Create South_Line17($\langle DigitTopG, 1, op, msr, msd \rangle$, $\langle Return_Path, 1, op, msr, msd \rangle$) from the micro-gadget shown in Figure 3b.
- Digit 2 (general): the following statements create the gadget shown in Figure 14a
 - Create North_Line5($\langle DigitTop, 2, op \rangle$, $\langle DigitTopA2, op \rangle$) from the micro-gadget shown in Figure 3a.
 - Create Topper($\langle \texttt{DigitTopA2}, op \rangle$, $\langle \texttt{DigitTopB2}, op \rangle$) from the micro-gadget shown in Figure 13a.
 - Create South_Line4 $l(\langle \texttt{DigitTopB2}, op \rangle, \langle \texttt{Return_Path}, 2, op \rangle)$ from the micro-gadget shown in Figure 3b.
- Digit 2 (MSD): the following statements create the gadget shown in Figure 14n
 - Create North_Line4l(\(\text{DigitTop}, 2, op, \text{msr}, \text{msd} \), \(\text{DigitTopA}, 2, op, \text{msr}, \text{msd} \)) from the micro-gadget shown in Figure 3a.
 - Create Topper(\(\text{DigitTopA}, 2, op, \text{msr}, \text{msd} \) , \(\text{DigitTopB}, 2, op, \text{msr}, \text{msd} \))
 from the micro-gadget shown in Figure 13c.
 - Create South_Line4 $l(\langle DigitTopB, 2, op, msr, msd \rangle, \langle DigitTopC, 2, op, msr, msd \rangle)$ from the micro-gadget shown in Figure 3b.
 - Create South_Line30($\langle DigitTopC, 2, op, msr, msd \rangle$, $\langle Return_Path, 2, op, msr, msd \rangle$) from the micro-gadget shown in Figure 3b.
- Digit 3 (general): the following statements create the gadget from Figure 14a
 - Create North_Line5($\langle DigitTop, 3, op \rangle$, $\langle DigitTopA, 3, op \rangle$) from the micro-gadget shown in Figure 3a.

- Create Topper($\langle {\tt DigitTopA}, 3, op \rangle$, $\langle {\tt DigitTopB}, 3, op \rangle$) from the micro-gadget shown in Figure 13a.
- Create South_Line4 $l(\langle \texttt{DigitTopB}, 3, op \rangle, \langle \texttt{Return_Path}, 3, op \rangle)$ from the micro-gadget shown in Figure 3b.
- Digit 3 (MSD): the following statements create the gadget from Figure 14a
 - Create North_Line5($\langle DigitTop, 3, op, msr, msd \rangle$, $\langle DigitTopA, 3, op, msr, msd \rangle$) from the micro-gadget shown in Figure 3a.
 - $\ \, {\rm Create} \ \, {\rm Topper}(\ \langle {\tt DigitTopA}, 3, op, {\tt msr}, {\tt msd} \rangle \, , \langle {\tt DigitTopB}, 3, op, {\tt msr}, {\tt msd} \rangle \,) \\ \, {\rm from \ the \ micro-gadget \ shown \ in \ Figure \ 13a.}$
 - Create South_Line4 $l(\langle \texttt{DigitTopB}, 3, op, \texttt{msr}, \texttt{msd} \rangle, \langle \texttt{Return_Path}, 3, op, \texttt{msr}, \texttt{msd} \rangle)$ from the micro-gadget shown in Figure 3b.

2.4.5 Return paths

After a Digit_Top has assembled, we know that the geometry the allows for the Warp_Unit to work has been placed, therfore the counter is free to return back near where it started reading the previous digit. The next gadget that assembles is the Return_Path gadget. The basic idea of this gadget is simply to provide a path from the end of Digit_Top to some general area closer to where the most recently read digit is located. Once the Return_Path has completely assembled, it output's a glue for the Next_Read gadgets to determine where the counter needs to assemble next.

For each $op \in \{\text{increment}, \text{copy}\}:$

- Create Return_Path($\langle ReturnPath, 1, op \rangle$, $\langle NextRead, 1, op \rangle$) from the general gadget shown in Figure 15a.
- Create Return_Path($\langle ReturnPath, 1, op, msr \rangle$, $\langle NextRead, 1, op, msr \rangle$) from the general gadget shown in Figure 15j
- Create Return_Path($\langle ReturnPath, 1, op, msr, msd \rangle$, $\langle NextRead, 1, op, msr, msd \rangle$) from the general gadget shown in Figure 15m.
- Create Return_Path($\langle ReturnPath, 2, op \rangle$, $\langle NextRead, 2, op \rangle$) from the general gadget shown in Figure 15d.
- Create Return_Path($\langle \text{ReturnPath}, 2, op, \text{msr}, \text{msd} \rangle$, $\langle \text{NextRead}, 2, op, \text{msr}, \text{msd} \rangle$) from the general gadget shown in Figure 15m.
- Create Return_Path($\langle ReturnPath, 3, op \rangle$, $\langle NextRead, 3, op \rangle$) from the general gadget shown in Figure 15g.
- Create Return_Path($\langle \text{ReturnPath}, 3, op, \text{msr}, \text{msd} \rangle$, $\langle \text{NextRead}, 3, op, \text{msr}, \text{msd} \rangle$) from the general gadget shown in Figure 15g.

2.4.6 The Next Read gadgets

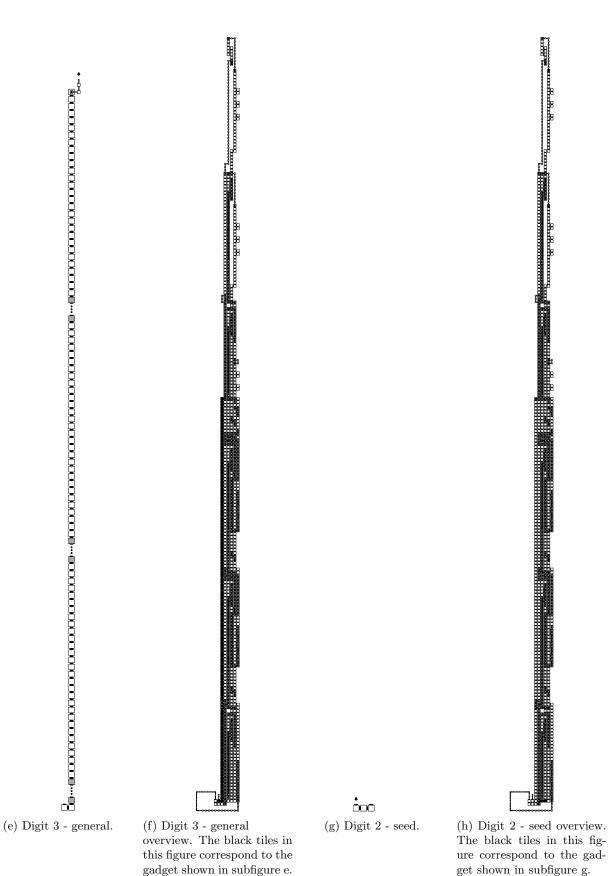

Once the Return_Path gadget has assembled, the counter has a few options to choose from. The gadget that controls what happens after a digit is written is the Next_Read gadget. If there is a msr and msd signal in the input, this gadget knows that the most significant digit was just read and will output a glue for the Cross_Next_Row gadget to assemble so that the counter crosses back to the right and begins reading the first digit in the next row. Otherwise (for regular digits – not in the MSR), this gadget will assemble the second half of the return path, terminating at the next digit in the current row. When this happens, the gadget increments the digit index (unless it is already digit 3, in which case it resets to 1) and outputs an empty Counter_Read signal to force the counter to begin reading the next digit.

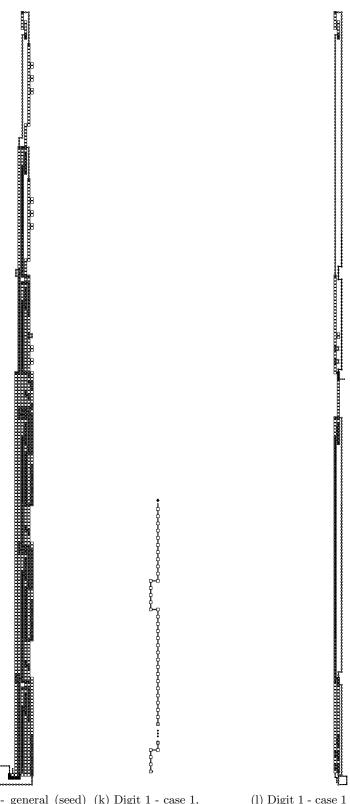

For each $op \in \{\text{increment}, \text{copy}\}:$

- Create Next_Read($\langle NextRead, 1, op \rangle$, $\langle CounterRead, 2, \lambda, op \rangle$) from the gadget shown in Figure 16a.
- Create Next_Read($\langle NextRead, 1, op, msr \rangle$, $\langle CounterRead, 2, \lambda, op \rangle$) from the gadget shown in Figure 16o.
- Create Next_Read($\langle NextRead, 1, op, msr, msd \rangle$, $\langle CrossNextRow, op \rangle$) from the gadget shown in Figure 16k.
- Create Next_Read($\langle NextRead, 2, op \rangle$, $\langle CounterRead, 3, \lambda, op \rangle$) from the gadget shown in Figure 16a.
- Create Next_Read($\langle NextRead, 2, op, msr, msd \rangle$, $\langle CrossNextRow, op \rangle$) from the gadget shown in Figure 16k.
- Create Next_Read($\langle NextRead, 3, op \rangle$, $\langle CounterRead, 1, \lambda, op \rangle$) from the gadget shown in Figure 16e.
- Create Next_Read($\langle NextRead, 3, op, msr, msd \rangle$, $\langle CrossNextRow, op \rangle$) from the gadget shown in Figure 16q.

2.4.7 Cross over gadget

The idea this gadget is to assemble after reading the MSD, routing the counter back to the start of the next row, in position for the counter to begin reading the first digit. The number of tiles shaded in darker grey is $6 \cdot \lfloor \frac{d}{3} \rfloor$.

For each $op \in \{\text{increment}, \text{copy}\}:$

• Create Cross_Next_Row($\langle \mathtt{CrossNextRow}, op \rangle$, $\langle \mathtt{CounterRead}, 1, \lambda, op \rangle$) from the gadget shown in Figure 17a.
